A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Shibata also teaches the axial unit state sensor 55detects the angular position of the two housings so that predetermined functions is selected for execution based on the detected angular relationship of the two housings, e.g. see Fig. 14, sections [0241-0249], such that when the first camera is activated and the flip is closed the camera is turned off.

As to claims 2-6, see Fig. 13, which discloses the various functions selected for execution based on the detected angular relationship of the two housings.
